

Continue

If you've been considering beefing up your internet security but don't know where to start, or you're waiting for the right deal, today is your lucky day. The Labor Day sales aren't stopping at mattresses and computers, and NordVPN is jumping on the deals train. Today you can get two years of NordVPN security for only \$99. That's an incredible \$225 off the usual price of \$323. The one-year plan is super cheap, too. Snag one of these great VPN deals soon because Labor Day is almost over. NordVPN 2-year plan — \$99 If you've gotten this far, you probably know what a VPN is, but let's do a little recap. Virtual Private Networks are software that let you mask the location of your computer by routing it through servers around the world. Some of the most common uses for VPNs are protecting your private info when using public Wi-Fi, hiding your location from spying eyes, or simply changing your location to England so you can watch more British sitcoms on Netflix. VPNs are a good idea for everyone, regardless of your perceived threat level. Identity thieves and hackers don't discriminate. A lot of people worry that routing their connection through various servers will slow them down. NordVPN prides itself on being the fastest VPN out there. So while it's true that you can't reach the same speeds as a direct connection, with NordVPN you'll still be able to stream movies and download files without a noticeable drop in speed. You'll have uninterrupted streaming with little to no buffering. NordVPN 1-year plan" cta="NordVPN 1-year plan") — \$59" cta="NordVPN 1-year plan"]NordVPN 1-year plan — \$59 One year of NordVPN is just under \$59. So if you're not ready to jump for the full two years, you can test the service out for just one. Of course, with two years costing only \$99, you can basically get a second year for only \$40. Both of these deals will let you disguise your IP address on a phone or computer, up to six devices in total. Get one year of VPN protection when you click the button below. More VPN deals There are other VPNs out there, and we've tracked the best deals on all of them. Check out the list below for some of the best options that will save you a chunk of change. Secure up to 5 devices, and access new key updates, including the option to connect to specific cities, new streaming service support, and whole-home router coverage. more NordVPN is one of the top VPNs on the market, using some of the toughest encryption across 5,000-plus worldwide servers. It also works with pretty much all operating systems and streaming devices. more If simplicity is your thing, then PrivateInternetAccess VPN is as easy to use as it is affordable. Your subscription also covers 10 devices simultaneously instead of the usual five or six. more FastestVPN is offering Lifetime VPN Plan with 15 Multi Logins + TWO privacy tools for 1yr for free: 2TB Internxt Cloud Storage and PassHulk Password Manager. more Privado is based in Switzerland, a locale known for tough privacy laws. It's also not part of the "14 eyes" surveillance network, so traffic isn't logged and passes through privacy-friendly countries. more Editors' Recommendations Finding a great VPN service can be a challenging task—and that's putting it mildly. It's not hard to find any VPN service. There are plenty of apps that promise to encrypt your connection by shuffling it through a third-party server, causing your requests to appear as if they're coming from said server (even if its halfway around the world) rather than your more easily identifiable device.To keep your public wifi browsing and BitTorrenting private, should you search the App Store or Google Play for "VPN," download any ol' app with a high rating, and call it a day? No, no, no.A free VPN—whether it's an app you download or a service you pay for and set up on your devices manually—is bad, because if a company isn't charging you a penny for server investments or upkeep, it's undoubtedly making its money by tracking everything you do and selling that information to someone else. Even well-known companies are guilty of this. Trust nobody that uses the f-word to try and entice you to use a VPN.I see sales for paid VPN services all the time, too, and I'm usually hesitant to pull the trigger on any of them. They aren't free, so there's that, but you still have make a decision based on trust. A service you've never heard of, headquartered in a foreign country, has a lovely looking privacy policy that claims it's not tracking a single thing you're doing. How can you be sure?I've scoured through advice from a number of legitimate security- and privacy-minded watchdogs, and here's a roundup of the basic tips you'll want to keep in mind when shopping for a VPN service. There are a lot of them, but they're important because your data security is important.Federal Trade CommissionResearch the VPN app before you use it. You are trusting a VPN with potentially all of your traffic. Before you download a VPN app, learn as much about the app as you can. Look up outside reviews from sources you respect. You can also look at screenshots, the app's description, its content rating, and user reviews, and can do some online research on the developer. The fact that an app promises security or privacy does not necessarily make it trustworthy.Carefully review the permissions the app requests. Apps will present the permissions they request on their app store page, during installation, or at the time they use the permission. It's useful information that tells you what types of information the app will access on your device in addition to your internet traffic. If an app requests particularly sensitive permissions (reading text messages, for example), consider whether the permission makes sense given the app's purpose and whether you trust the app developer with that access.Electronic Frontier FoundationHow long has your VPN provider been around? If it is relatively new and without a reliable history, you'd have to trust the provider a great deal in order to use such a service.Does the VPN provider log your traffic? If yes, what kind of information is logged? You should look for one that explicitly promises to not log your Internet traffic and how active the VPN provider is in advocating for user privacy.Does the VPN provider use encryption in providing the service? It's generally recommended to use services that support a well-vetted open source protocol like OpenVPN or IPsec. Utilizing these protocols ensures best security available.If your VPN provider uses encryption, but has a single shared password for all of the users, it's not sufficient encryption. [[David: Like this, for example]]Krebs on SecurityMy bar for choosing a VPN provider has more to do with selecting one that makes an effort to ensure its customers understand how to use the service securely and safely, and to manage their customers' expectations about the limitations of using the service. Those include VPN companies that take the time to explain seemingly esoteric but important concepts, such as DNS and IPv6 leaks, and whether they keep any logs of customer activity. I also tend to put more stock in VPN providers that offer payment mechanisms which go beyond easily-traceable methods such as credit cards or PayPal, to offering more privacy-friendly payment options like Bitcoin (or even cash).That One Privacy Site"You may have started your search for a VPN by looking for 'VPN Reviews' in your search engine of choice. If you had, you would have gotten page upon page of what seem to be harmless review sites, top 10 or blog style reviews of different VPN services. You may even be coming here for confirmation of what you were told on those sites. The sites making these recommendations are, in almost every case, paid by the services they review and recommend. They are beginning their business relationship with you, with what essentially amounts to a lie. The technical term for this kind of marketing is 'native advertising' and its abuse is a huge problem in the VPN industry."Restore Privacy1. Located in a good privacy jurisdiction (outside of 5/9/14 Eyes countries) to keep user data safe2. Passed all tests with no leaks found whatsoever (no IP address leaks or DNS leaks)3. Good performance throughout the server network (speed and reliability)4. High-quality VPN apps with all features working correctly5. Supports the OpenVPN protocol and strong encryption standards6. Offers a money-back guarantee (between 7 and 30 days)7. Trustworthy and well-established VPN provider with a good track recordWirecutter"A 'kill switch' goes by many names, but the term describes VPN software that shuts off all network traffic in and out of your computer if the encrypted connection fails. A hiccup in your Wi-Fi or even with your ISP can cause a VPN to disconnect, and if you then maintain an insecure connection—especially if the VPN software doesn't alert you that it's no longer protecting your traffic—that wipes out all the benefits of your VPN. We considered kill switches to be mandatory. And although we looked for apps that made it easy to add rules about when to activate kill switches, we considered special config files or manual firewall tweaks to be too complex."Dear Lifehacker, I've read about why I really should use a VPN and I've been looking into different Read moreFinding the right VPN for youEven though you now have an idea of what to look for in your next VPN, the research phase isn't over—close, but not quite. While I have a handful of reviewers I trust for solid gadget and software recommendations, VPNs are a different story entirely. I've seen plenty of reviews that are just speed tests masquerading as helpful advice. How long it takes to download files, while useful, shouldn't be the top priority when you're picking your next VPN. Security and privacy are much more important, and not everyone tests these aspects as well as others (if at all)You'll be the most secure if you set up and run your own VPN, but that's likely beyond most people's skills. It's a little easier to use a VPN server that's built into your router or network-attached storage, but that's only useful if you're looking to encrypt your traffic on a public wifi connection. Your ISP is still going to see everything you do, which makes this solution less practical if you're trying to hide something you're doing from a company that might get mad if it caught you doing it.Were I shopping for a new VPN, I'd fire up Excel or Google Sheets and create a giant analysis that looks at how various services address the various talking points I just highlighted. To populate that list, I'd look for services that are highly recommended from privacy-minded websites like TorrentFreak, That One Privacy Site, privacytools.io, or Restore Privacy, as well as thoughtful aggregators like vpnMentor or Wirecutter. I'd also read through users' experiences with various VPNs over at *it/VPN*, just to make sure I didn't miss any problems a service's users have reported.If you're giving another company free access to your data, you owe it to yourself to know as much about the process as possible.There isn't one great resource for finding your next VPN—at least, none that I trust completely. Doing the legwork is important, and it's a lot of work, I know. Succeed in your task, and you'll come away from the process with a lot more confidence in the VPN service you ultimately pick (if you even go for one at all). More importantly, you will graduate from a self-taught crash course in network security, which will help you be a smarter and more privacy-minded web user for years to come. If you're giving another company free access to your data, you owe it to yourself to know as much about the process as possible—and then a little bit more.
